

CORPORATE CAPABILITY STATEMENT

Specialized line cutting, remote access and vegetation management | Western Canada

35 YEARS OF INDUSTRY EXPERIENCE

ALC draws on a foundation established in 1991 through Initial Exploration Services Inc. (IES). Following the sale of IES in 2025, ALC was established as a focused contractor supporting mining, oil & gas, forestry and remote infrastructure projects.

CORE SERVICES

Mining & Mineral Exploration

Conventional and low-impact line cutting; geophysical survey grids; grid establishment; drill and helicopter pad clearing.

Oil & Gas

Seismic line cutting, survey access, right-of-way clearing, and vegetation management.

Forestry & Wildfire Mitigation

Mechanical mulching, fuel reduction clearing, access trails, and vegetation management.

Remote Access & Site Preparation

Access corridors, staging areas, helicopter landing zones, and remote worksite preparation.

FIELD & OPERATIONAL CAPABILITIES

Equipment & Field Methods

Professional brush-cutting and clearing equipment; mechanical mulching capabilities; GNSS-enabled field data collection.

Equipment selection is matched to project scope and site conditions.

Digital Reporting & Quality Control

Georeferenced field records, GNSS positioning, digital production tracking, daily progress summaries, and updated project mapping.

Remote Project Logistics

Mobilization planning, helicopter coordination, personnel and equipment logistics, and remote camp support where required.

SAFETY & PROJECT EXECUTION

ALC emphasizes documented field-level hazard assessments, safe work procedures, incident and near-miss reporting, worker accountability, defined scopes of work, proactive client communication, and disciplined project coordination. Project-specific safety and compliance documentation can be discussed during contractor qualification.

OPERATING REGIONS

British Columbia | Alberta | Saskatchewan | Manitoba
